New Canaan, CT | (203) 505-4137 | cashleydata@gmail.com | linkedin.com/in/cashleydata | cashley104.github.io/CashleyData.github.io

Profile

Data analyst with an economics background and experience cleaning, transforming, and validating nonprofit and property data. Builds Tableau reporting and independent SQL, Python, and Power BI projects covering data modeling, forecasting, and reconciliation.

Skills

- **Tools & Technologies:** SQL Server (joins, CTEs, window functions), Excel (PivotTables, SUMIFS, INDEX/MATCH), Power BI (DAX), Tableau, Python (Pandas, Selenium, BeautifulSoup), AI tools (ChatGPT, Claude)
- **Analytical Skills:** Data cleaning and transformation, data modeling, dashboard development, forecasting, variance analysis, reconciliation, data validation, web scraping, stakeholder reporting

Professional Experience

Career Resources, Inc. - Bridgeport, CT | **Data Analyst** | Feb 2025 to Present

- Built Tableau dashboards comparing four years of Connecticut reentry trends across end-of-sentence and community-supervision populations.
- Combined multi-year Excel data and reshaped it from wide to long format for Tableau; validated annual percentages and separated housing measures by source and population.
- Created and refined FY2024 impact infographics with leadership, presenting outcomes covering 48,943 individuals, nearly 3,000 case-managed clients, and 300+ employers for board members and funders.

New Canaan Land Trust - New Canaan, CT | **Data Analyst** | Feb 2024 to Dec 2024

- Built Python/Selenium workflows to collect current municipal property-owner data and produce an Excel list staff used for outreach to neighboring property owners.
- Matched property-owner records against Little Green Light CRM exports in Excel, identifying existing members and ownership changes for staff outreach.
- Investigated missing and inconsistent owner records and refined the update logic so the final outreach list stayed accurate.

ClearVest Advisers LLC - New York, NY | **Data Analyst Intern** | May 2017 to August 2017

- Co-developed Python data-mining tools with Selenium, BeautifulSoup and Pandas that automated securities data collection and restructured results into analysis-ready datasets.

Selected Projects

- **Walmart Store Performance** - Built an independent Python, SQL Server and Power BI project for 421,570 weekly sales records, with a star schema, SQL reporting views, joins, aggregations, validation queries, DAX measures and forecasting.
- **U.S. Import Duty Exposure** - Built a Power BI dashboard analyzing $1.14T in 2025 machinery and electronics imports and $80.0B in calculated duties, with measures for dutiable value, effective duty rate, and sourcing-country exposure.
- **Gravity in the NBA** - Built a Python pipeline and interactive dashboard using play-by-play and rotation data to reconstruct lineups and analyze teammate shooting with and without each player, with lineup and data-quality checks.
- **Left Right Audio Splitter** - Built and published a Chrome extension used by 1,000+ users, using the Web Audio API for per-tab channel routing, one-ear audio correction, channel swapping, and automatic window-based routing.
